

Know when to leave home.

An AI front desk for the private clinic. It talks to patients, books their visits, protects emergencies, and tells each one the minute to leave home.

One doctor. One secretary. Evening hours.

83%

of clinics start late, by 15 to 60 minutes. The doctor comes from the hospital.

45 min

the median wait in the waiting room. The average is 66, and a third of clinics pass an hour.

83%

take bookings mainly by phone. The secretary answers the same calls all evening.

SURVEY Colleagues who run private clinics in Cairo and Sharqia, September 2026.

From "come at seven and wait" to one message at the right minute.

BEFORE

Everyone comes at opening and waits.

The doctor is late and nobody knows.

The secretary answers the same calls all evening.

A full day means "call tomorrow".

WITH NOWA

→ Each patient gets one message at their own minute: **اتحرك دلوقتي**

→ One tap by the doctor: **أنا في الطريق**

→ The chat books, moves, cancels and answers, at any hour.

→ A waiting list offers the freed place at once.

More than a booking bot.

- 1 Talks like the secretary, in Arabic, English or Franco.
- 2 Books, moves and cancels visits.
- 3 Answers health questions from approved medical pages, with the source.
- 4 Sends what needs the doctor to the doctor.
- 5 Stops for an emergency: "call 123", and no booking.
- 6 Runs the evening from two taps, and learns the clinic.

The AI talks. **Code decides.**

4 / MEASURED IMPACT, A LABEL ON EVERY NUMBER

229 → 21 min

Median wait on a full 30-patient evening.

SIMULATED 300 evenings, assumed inputs.

Nowa has not served a real clinic yet. Its own results are simulated, and the survey is the measurement.

45 to 66 min

the wait in clinics today

SURVEY

100 to 190 h

patient-hours returned per clinic per month

ESTIMATE

1.7 EGP

cost to run, per patient

ESTIMATE

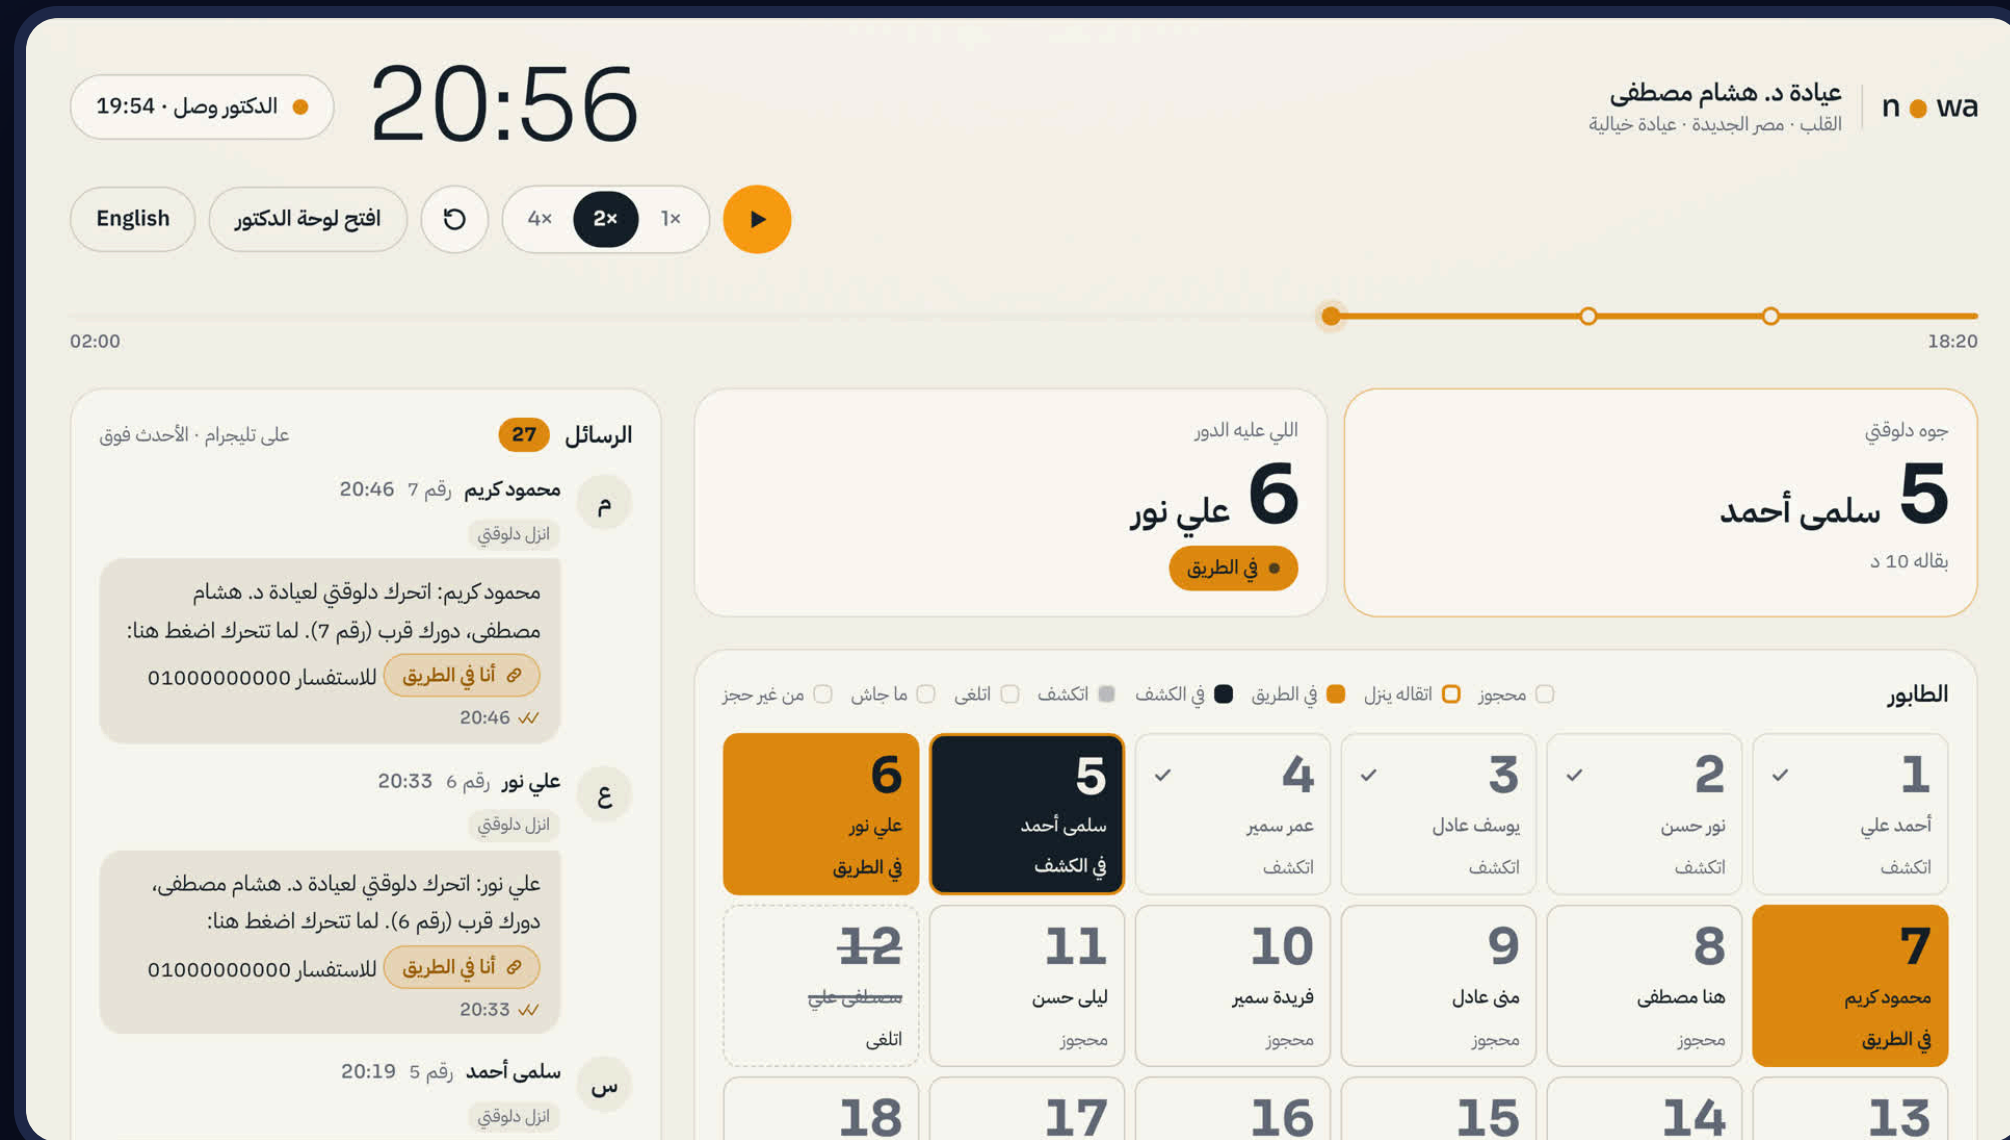

1,500 EGP

price per clinic per month, about two visit fees

PROPOSED

5 / SEE IT WORKING

It runs tonight. Open it.

CODE

github.com/drmohpioneer/nowa

1,968 automated tests. Runs in 5 minutes with no keys.

Built to be left running in a clinic.

SAFE BY DESIGN

- An emergency check runs first on every message.
- The AI has no tools. It cannot book, send or change a time.
- Every message is a fixed, approved text.
- Patient data is kept to the minimum, with set retention.

WHAT COMES NEXT

- A first pilot in my own clinic, to measure the real wait.
- SMS for patients without Telegram.
- The data-protection licences before real patient data.
- More specialties beyond cardiology.
